AN EXELON COMPANY

Tree maintenance has occurred on this property

We understand how important dependable electricity is to your day-to-day life. When storms occur, ComEd's first priority is to ensure dependable electric service by restoring power safely and quickly to customers experiencing a power outage.

As a result of a recent storm or strong winds, a damaged tree was interfering with a power line in your area. ComEd has safely cleared the damaged tree or tree limb from the power line and placed the debris on the ground nearby.

To restore power more quickly to customers in the wake of a weather event, our crews are unable to dispose of debris associated with trees damaged by storms, winds, ice or other weather-related circumstances.

ComEd responsibility: Cutting, trimming or removing trees or branches from our equipment in an effort to restore service and ensure future reliability.

Customer responsibility: The disposal of branches, logs or other debris associated with trees damaged by storms, ice, winds or other natural causes.

If you need assistance with tree debris removal, visit TCIA.org to find local tree service companies that are members of the Tree Care Industry Association. There may be a cost associated with this service.
